DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 01/06/2010 has been entered.

Allowable Subject Matter

2. Claims 1-5, 13-16, 22-29 are allowed.

3. The following is an examiner's statement of reasons for allowance:

The claims are allowed in view of applicant's submissions, remarks, and amendments filed 01/06/2010. Specifically, the prior art of record does not expressly disclose:

A communications network comprising:

two or more points of presence for communication with wireless terminals, each point of presence represents a cell site, each point of presence having multiple receive antennas which provide diversity reception of wireless signals at the point of presence;

a central site having one or more controllers, the one or more controllers comprise a selection system, **the selection system carries out macro-diversity**

Art Unit: 2617

selection using a cell selector and micro-diversity selection using an antenna selector; and

a switch system through which receive signals from each of the multiple receive antennas of each point of presence are connected to the selection system, wherein based on analysis, at the selection system at the central site, of the receive signals from each of the multiple receive antennas of each point of presence: (a) the cell selector performs the macro-diversity selection to counter macro spatial effects in the communications network, and **selects one of the points of presence from the two or more cell sites points of presence for reception from a particular wireless terminal**, and (b) the antenna selector performs the micro-diversity selection to counter micro spatial effects in the communications network, and selects one of the receive antennas of the multiple receive antennas of the selected point of presence, such that **the antenna selector selects a micro-diversity channel from each point of presence from among at least two micro-diversity channels from each point of presence, and the cell selector selects a macro-diversity channel from among the selected micro-diversity channels.**

Although ISHIKAWA discloses macro and micro base stations and selection of both a macrocell and microcell, the macrocell differs from the point of presence claimed by the applicant. As disclosed a point of presence provide diversity reception at the point of presence which differs from the cell zoning and selection disclosed by ISHIKAWA. Furthermore, REED discloses the use of macro diversity and micro diversity reception (col. 1, line 20-28), however fails to disclose selecting a micro-

Art Unit: 2617

diversity channel from each point of presence from among at least two micro-diversity channels from each point of presence, and the cell selector selects a macro-diversity channel from among the selected micro-diversity channels.

Furthermore, SHPAK (US 2004/0162037) discloses access points **22** including multiple antennas **20, 32** and PALLONEN (US 6,408,169 B1) discloses determination of antenna diversity at a base station, however neither teaches selecting a micro-diversity channel from each point of presence from among at least two micro-diversity channels from each point of presence, and the cell selector selects a macro-diversity channel from among the selected micro-diversity channels

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

SHPAK (US 2004/0162037 A1) – Multi-Channel WLAN transceiver with antenna diversity

PALLONEN (US 6,408,169 B1) – Selecting an antenna beam of a base station

SAKAMOTO et al (US 2004/0258023 A1) – Switch and diversity hand-over processing

Art Unit: 2617

WALTERS et al (US 6,112,058) – Confidence metric processing for bandwidth reduction
